

Epilepsy and Emergency Medication

(online training only)

Learning aims and outcomes

Online learning in supporting clients with epilepsy and administration of emergency medication for seizure management.

This course equips support workers with a clear understanding of epilepsy, seizures, first aid, and the safe administration of emergency medication.

With a focus on safe and effective client support, you will learn the key steps and responsibilities involved in checking and administering emergency medication to minimise risk and prevent errors.

Downloadable resources and video demonstrations provide detailed guidance on seizure-related medication administration.

Please allow approximately two hours to complete this online course.

Learning Outcomes

Upon successful completion of this course, you will be able to:

- explain the terms epilepsy and seizure
- identify key seizure classifications
- recognise common seizure triggers
- describe appropriate first aid actions for motor-response seizures
- explain the significance of an Epilepsy Management Plan in client care
- state the safe routes of administration for midazolam for seizure control
- describe the risks of midazolam and outline safe support procedures during and after administration.
